

CN2052 Accuratech Main Blade Balancer Instruction

1. Mount blades on balancer and mark lighter and heavier blade
2. Check for center of gravity and mark it's position using balance beam.

3. There are 3 possible outcome conditions: A., B. or Perfect (see fig .2)
4. If condition A. then add weight on the root end of the lighter blade until the C.G. of both blades are in the same position.
5. If condition B. then add weights to the tip of the lighter blade until the C.G. of both blades are in the same position.

6. Now that the C.G. is in the same position on both blades you will want them to weigh the same. Mount both blades onto the balancer.
7. Add weight to the C.G. point on the lighter blade until the balancer device levels out on both sides.
8. Enjoy!
